ESG Focus for Investors

April 2025

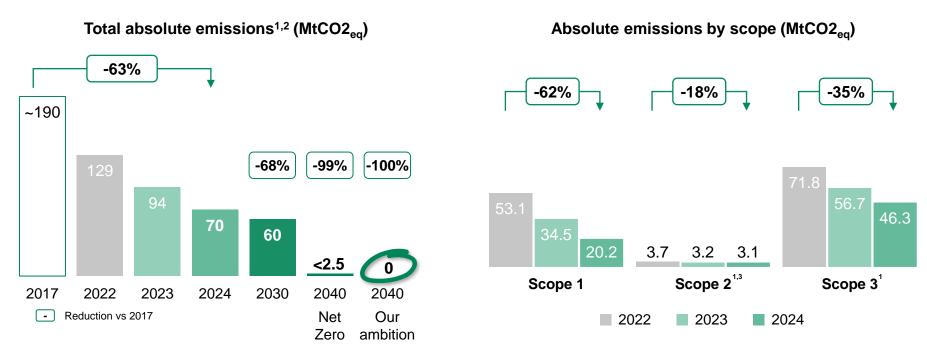

Climate change

Achievements, Strategy and Targets

Total GHG emissions

^{1. 2022} and 2023 restated figures, recalculated based on methodological updates

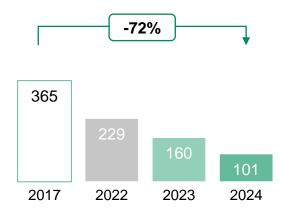

^{2.} Figures include Scope 2 emissions following the "location based" calculation methodology. Figures for Total absolute emissions following the "market based" calculation methodology are: ~130 MtCO2eq for 2022, ~96 MtCO2eo for 2023 and ~71 MtCO2eo for 2024.

^{3.} Figures refer to Scope 2 emissions following the "location based" calculation methodology. Figures for Scope 2 emissions following the "market based" calculation methodology are: 5.1 MtCO2_{eq} for 2022, 4.4 MtCO2_{eq} for 2023 and 4.9 MtCO2_{eq} for 2024

GHG emissions targets | Scope 1 generation

Historical trend¹ (gCO2_{eq}/KWh)

Short, medium and long-term targets (gCO2_{ea}/KWh)

No negative emission technologies or offsets will be deployed on the path to the zero-emission goal

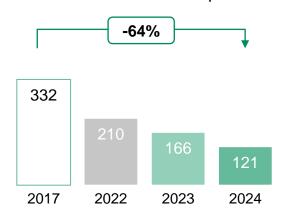

#% Reduction vs 2017

GHG emissions targets | Scope 1&3 Integrated Power

Historical trend¹ (gCO2_{eq}/KWh)

Short, medium and long-term targets (gCO2_{eq}/KWh)

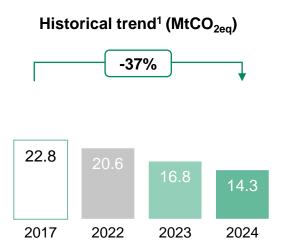

No negative emission technologies or offsets will be deployed on the path to the zero-emission goal

#% Reduction vs 2017

GHG emissions targets | Scope 3 Gas Retail

Short, medium and long-term targets¹ (MtCO_{2eq})

No negative emission technologies or offsets will be deployed on the path to the zero-emission goal

#% Reduction vs 2017

^{1.} Recalculated after updating in 2024 the calculation method for aligning the volumes of natural gas sold to end customer according to the corresponding calorific value with the IPCC factor used.

GHG emissions targets | Additional Scope 1, 2 & 3 Emissions

Short, medium and long-term targets (MtCO_{2eq})

Neutralize the residual amount through carbon-removal actions if complete emissions' mitigation is not feasible due to exogenous factors

#% Reduction vs 2017

^{1.} Baseline 2017 in line with 2022 SBTi certification. 2023 restated figure, recalculated based on methodological updates

^{2.} Figures in line with the 2040 target. The figures related to the 2030 target are: 23.1 MtCO2eq for 2017, 18.7 MtCO2eq for 2022, 12.7 MtCO2eq for 2023 and 10.6 MtCO2eq for 2024

^{3. 2022} and 2023 restated figures, recalculated based on methodological updates

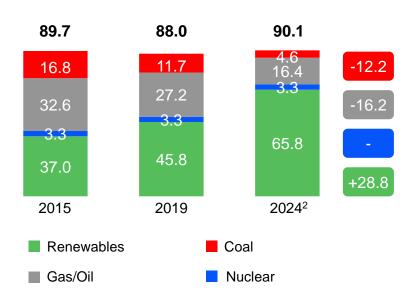

^{4.} The target covers specific supply chain categories that accounted for 40% of supplier emissions in 2017

^{5.} The target covers all supply categories included in the 2017-2030 roadmap and additional ones, which account for 54% of supplier emissions in 2017

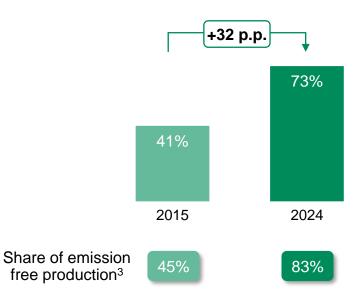

Transition pathway

Capacity evolution by source 2015-2024 (GW)¹

Share of Renewable capacity²

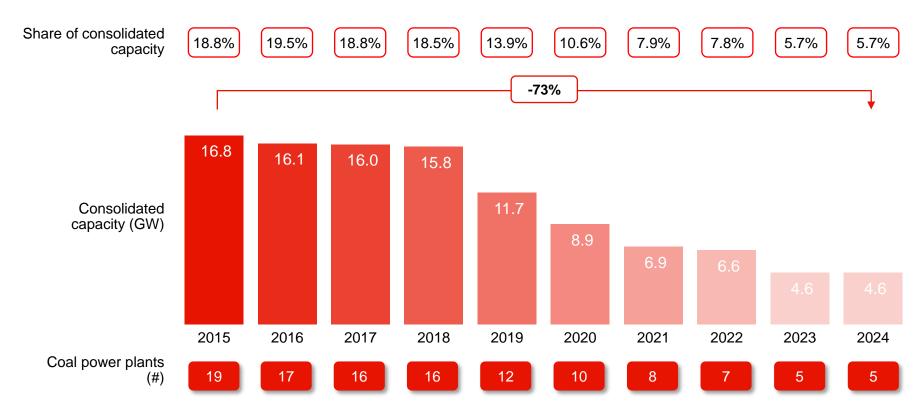

^{1.} Rounded figures

^{2.} It includes renewable unconsolidated capacity and BESS capacity

^{3.} Emission free production includes nuclear and renewable production (consolidated and unconsolidated)

Coal capacity evolution

Sticking to our coal phase-out plan

For these sites and according to its coal phase-out plan, Enel will evaluate new energy projects, in integration with non-energy projects developed by third-parties

Operating positioning to reach short and medium-term enclosed decarbonization targets

Ca	pex plan aligned wit	h
our	climate-related targe	ets

>80% 2025-27 capex aligned to EU Taxonomy¹

>90% 2025-27 capex aligned to the SDGs²

		2023	2024	2027	2030
1	RES capacity on total ³	71%	73%	79%	~85%
CO ₂	GHG free production on total ⁴	75%	83%	86%	~90%
	Unitary consumption (MWh/cl/Y)5	2.65	2.76	~2.9	~3.5
	Gas volumes (bcm)	8.3	7.1	7.2	5.3
	Distributed generation connections (mn)	~2	2.4	3.4	~6
	Digitalized grid customers	64%	66%	70%	~100%6

 $\alpha \alpha \alpha \alpha$

 $\alpha \alpha \alpha \alpha$

Our long-term climate strategy: partnering with all our stakeholders in the fight against climate change

Financial Community & Partners

- > Enel capex plan fully aligned with 2040 Net Zero targets
- > Sustainability-linked instruments to finance Enel decarbonization strategy

Planet

- > Exit from coal power generation by 2027¹ & gas power generation by 2040
- > 100% GHG free fleet by 2040

Clients

- > Exit gas retail by 2040 pushing on electrification of uses
- > 100% sales from GHG free sources by 2040

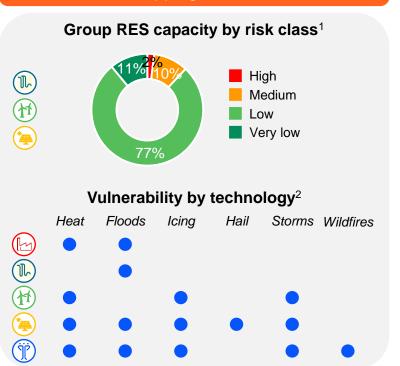

Employees, Suppliers & Communities

- > Decarbonize the supply chain by 2040
- > Dialogue, engagement and collaboration in line with the principles of a just transition

Managing acute physical risks ...

Mapping risks...

...to define action plans

Global insurance programs

- Assets and resulting business interruptions
- Losses caused to third parties

Gross impact from climate events³ (€mn)

< 0.06% of Group's insured values

Adaptation activities

Vary by technology and assets' features, e.g.:

RESILIENCE

Drainage pumps to mitigate flood risks

Interventions to increase the robustness of infrastructure

RESPONSE

Site specific emergency plans

Global guidelines for critical event management

...while preparing for chronic climate changes

Assessing M/L term risks and opportunities...

Main impacts on assets¹ Rain Wind Solar Sea Water radiation level temp. temp. Main risks and opportunities Air temperature affects power demand Water levels and temperature impact thermal gen. Rainfall and temperature may change hydro gen. PV generation depends on solar radiation Wind generation depends on wind intensity

...that shape strategies and enhance value

Strategy implementation

- Prioritizing phenomena and scenario analysis: linking scenarios to business operations
- Impact assessments: quantifying the effects at operational, economic and financial level
- Operational and strategic actions: info from previous activities informs Group decisions such as capital allocation and business activities

Economic sensitivity to chronic scenarios

UPSIDE (RCP 2.6) AND DOWNSIDE SCENARIO (RCP 8.5)

EBITDA/year from change in renewable gx³ (€mn)

<100

IPCC² physical climate scenarios considered for both acute and chronic events: RCP 2.6, RCP 4.5 and RCP 8.5

Advocating for climate actions aligned to the Paris Agreement

Direct advocacy

- Enel continuously assesses the alignment of its direct advocacy actions with the Paris Agreement
- Enel's advocacy efforts are defined in alignment with the Group's Strategy, which aims to promote an accessible, secure, and sustainable energy system
- General principles guiding Group's actions in achieving GHG emissions reduction targets 1.5°C SBTi certified:
 - Renewables/storage development
 - > Decarbonization & electrification of consumption
 - Networks digitalization and improvement of resilience against climate events
- In line with the Group's "Climate Change Risks and Opportunities" policy, Enel's climate advocacy activities are supported by energy transition roadmaps, engaging a broad spectrum of stakeholders to drive national actions aligned with the Paris Agreement goals

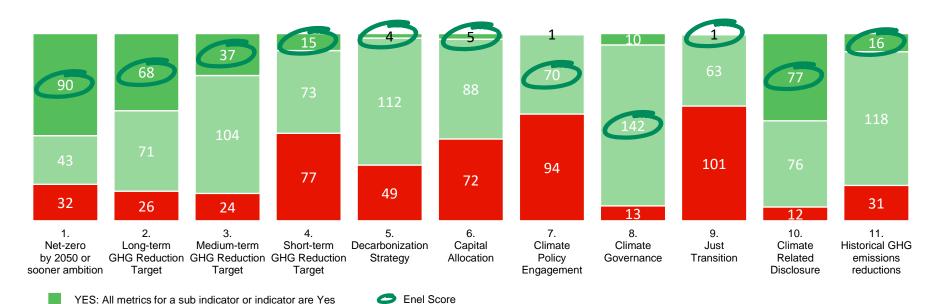

Indirect advocacy

- Enel systematically verifies that the positions of the associations it collaborates with on climate related issues are consistent with the Paris Agreement and the Group's climate policies, before and after joining the association
- Enel discloses the list of all the main associations and their level of alignment with the Paris Agreement¹
- In case the level of alignment with the Paris Agreement for an association result to be "low":
 - Enel raises the issue within the association and initiates an in-depth discussion with the aim of improving the alignment
 - If the assessment is "low" for two consecutive years, the CEO will assess possible counteractions which may also include the decision for Enel to leave the association

Climate Action 100+ Net Zero Company Benchmark

Enel is the best performer among all the companies in the Net Zero Company Benchmark¹

PARTIAL: At least one (not all) metrics for a sub indicator or indicator is Yes

NO: All metrics for a sub indicator or indicator are No

Natural Capital The flip side of climate

Environmental Sustainability | Nature

Framework

- > Environmental Policy: Meeting legal requirements and protecting the environment, covering the entire value chain
- **Biodiversity Policy:** Alignment with the Kunming-Montreal Global Biodiversity Framework
- > Biodiversity Guidelines: Definition of principles and procedures for managing impacts on biodiversity during the life cycle of plants

Disclosure

- Result of cooperation with TNFD, GRI and WBCSD, among others
- Identification of main impacts and dependencies
- Prioritization of the operating assets and LEAP¹ analysis on 1st set of hotspots

Dependences: Impact Drivers: X Use of terrestrial ecosystems Climate regulation Use of freshwater ecosystems 0 \otimes 0 • Water withdrawal Use of surface water X GHG Emissions Use of groundwater • • Air pollutants (non-GHG) control 0 Water pollutants 0 Soil pollutants Solid waste X Disturbance factors

Main impacts on nature

Dependences: Image: Construction & Image: Con

Main dependencies from nature

Environmental Sustainability | Biodiversity

Enel's roadmap on biodiversity conservation in line with the Kunming-Montreal global biodiversity framework

The Biodiversity Policy foresees the application of the Mitigation Hierarchy Principle in all project phases

Enel's commitment

- No Go in UNESCO World heritage natural site areas¹
- No Net Loss on selected projects in high biodiversity areas starting from 2025
- Biodiversity No Net Loss for new infrastructures by 2030
- No Net Deforestation by 2030

Expected % of built No Net Loss plants in 2027⁴

40%

Achieved so far

Disclosure largely aligned to **TNFD**² Guidelines for **impacts**, **risks and opportunities evaluation**

Identification of **hotspots**, i.e. sites with operational plants or infrastructures that present the **highest potential level of impact/risk** and **LEAP analysis** of the 1st set³

Preliminary qualitative assessment on the impacts linked to the main raw materials in the supply chain

Next steps

Full adoption of the TNFD Guidelines starting from the financial year **2025**

Completion of **LEAP** (Locate, Evaluate, Assess, Prepare disclosure) analysis on **hotspots**

For new plants: **identification of impacts and compensation measures** to be applied in **No Net Loss Methodology**

4. Calculated as the ratio between the number of No Net Loss achieved plants and the number of total plants. Based on 2027 expected built additional capacity

^{1.} Commitment related to new generation infrastructures

^{2.} Taskforce on Nature-related Financial Disclosures

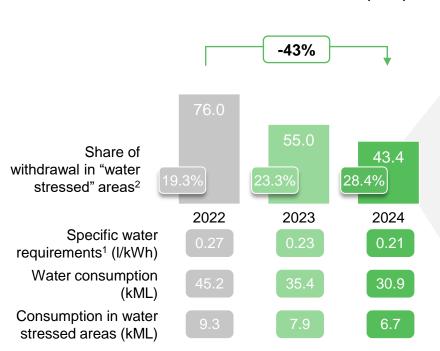

^{3.} Representing around 30% of total hotspots

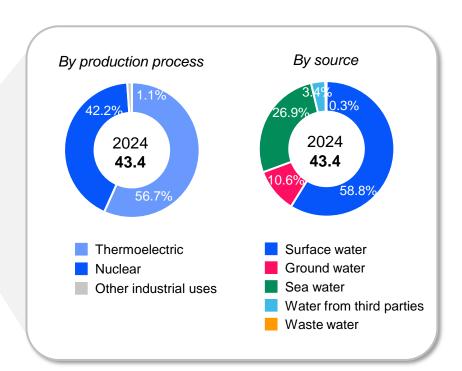

Environmental Sustainability | Water

Total water withdrawal (kML)

^{1.} Related to process and closed-cycle cooling water

Environmental Sustainability | Water

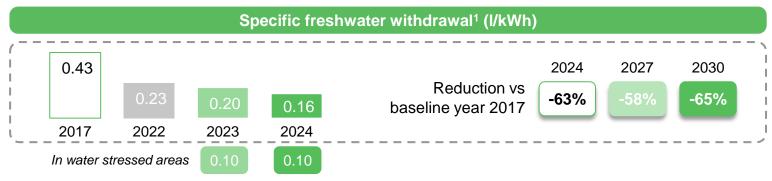

Enel applies an integrated approach for optimal management of use of water resources and their protection

Water quality conservation

Downstream of internal **recoveries and reuses**, wastewater discharged from the plants is returned to the surface water body. Discharge always takes place downstream of a **treatment process** that removes any pollutants present to a level where they will **not** have a **negative impact** on the receiving **water body**, in compliance with the limits provided for under national regulations and by operating permits

Strategic goals

➤ Enel adopted an internal Water Management Policy outlining guidelines for the use and supply of water and marine resources, considering the entire lifecycle of assets, with a focus on water-stressed areas and local community involvement

Natural Capital | Air Quality, Pollutants and Waste

					Reduction vs baseline year 2017		
,	2017	_ 2022 2	2023	2024	2024	2027	2030

Ensuring progress across the value chain

Human Rights | Our commitment

Enel's Commitment

Enel's Human rights Policy

Last **updated in 2021** to take into account the evolution of international frameworks, including:

- The International Charter of Human Rights and in the International Labor Organization Conventions
- > The United Nations Guiding Principles on Business and Human Rights
- > The **OECD Guidelines** for Multinational Enterprises
- > The 10 principles of the UN Global Compact, of which Enel is an active member

Focus on:

> Employment practices

> Relations with communities and society

Embedded in

Training

Human Rights | Our due diligence process

Involvement of both internal and external stakeholders, with the aim of identifying if any of our operating procedures and processes require an improvement plan to ensure adherence with the commitments undertaken in our Human Rights Policy

Assessment of the perceived risk

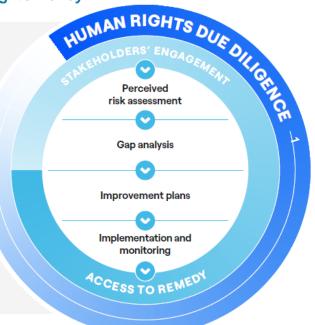

Identification of salient human rights issues to better understand where to focus our efforts and resources, through consultation with the relevant stakeholders

Identification of potential gaps

Assessment of our operating and risk monitoring processes and identification of any potential shortfall

Improvement plans and monitoring

Definition of the necessary remedies to tackle the residual risk identified in the gap analysis and implementation of the actions

Human Rights | Access to remedy

Grievance mechanism

- Whistleblowing channel available to internal and external stakeholders
- Several processes and tools available to the communities in the influence area of our operations
- Customer complaints or information channels

Whistleblowing channel and stakeholder reporting

SENDING A GRIEVANCE

Maximum
confidentiality and
anonymity is
guaranteed to every
stakeholder.
Stakeholders may
send grievance
through physical and
online channels¹

ANALYZING A GRIEVANCE

The Audit Function receives and analyzes the grievance and activates the necessary verifications

ACTING UPON AN EFFECTIVE VIOLATION

Should a violation be ascertained, the relevant corporate functions define the necessary actions and specification plans, if necessary

MANAGEMENT AND MONITORING

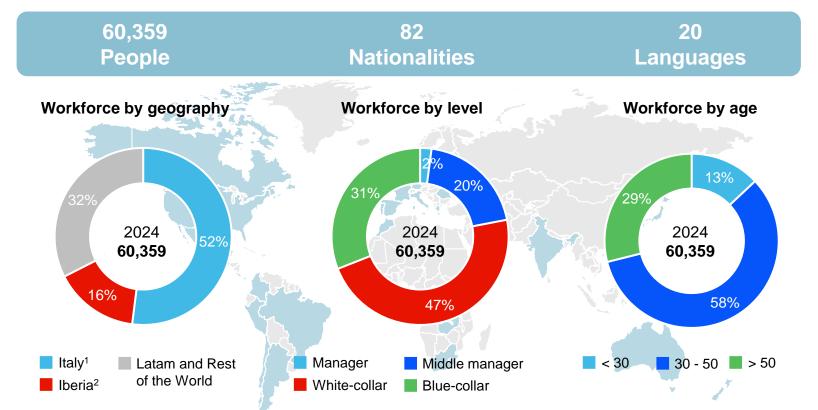

The Group has in place an information system to manage and monitor grievance received and ascertained violations

The Audit function reports violations that have emerged from stakeholder reports:

- > To the **Control and Risk Committee**, the **Chairman** of the BoD and the **CEO** of Enel SpA, who determine whether to report the **most significant cases** to the BoD
- > To the **corporate bodies** of direct and indirect **subsidiaries** for issues within their remit

Workforce overview

Initiatives to increase inclusion of different ethnicity and raise awareness on diversity (workshops, training programs and communication campaigns)

^{1.} Selection processes involving blue collars, or similar technical roles, and related to USA and Canada perimeter are not included as a result of local anti-discriminatory legislation which does not allow gender to be monitored in the recruiting phase 2. # of countries of implementation of such initiatives

Sustainability and Innovation in the Procurement Process | Suppliers and Contractors

Qualification

- Based on Product Groups, to which a determined level of risk is associated
- > Assessment on:
 - Legal/reputational aspects
 - Economic/financial aspects
 - Human Rights, Health & Safety, Environment
- For the highest risk PGs, an on-site assessment is mandatory for Health & Safety and environmental issues
- Qualified suppliers enter Enel's supplier register for 5 years
- Qualification commissions (at country level) oversees the qualification, as well as possible suspensions

Tendering

- The process includes mandatory sustainable requirement and sustainability Ks (incentive factors)
- Suppliers need to ensure that the entire supply chain complies with:
 - The ILO and UN Global compact's principles
 - Enel's Human Rights Policy, Code of Ethics, Zero Tolerance of Corruption Plan
- Go Zero Dashboard calculates supply chain emissions and reduction curves to 2030 and 2040¹
- Suppliers of core categories² need to map the geographical areas of extraction and production of each individual material/component

Q

Monitoring

- Registered suppliers are monitored on reputation and financial aspects
- For suppliers with an active contract, Health & Safety and Environment monitoring is performed through field inspections
- The Evaluation Group (HSEQ Function, Procurement, Legal Function and the Business Lines) evaluates possible consequence measures which includes application of penalties, assignment of an improvement plan, suspension and termination of the contract.

Sustainable Supply Chain

Merchandise groups preliminarily evaluated in terms of risks, based on human rights, environmental, social and economical criteria

100%

Qualified suppliers evaluated under social, environmental and safety criteria

Supply chain traceability

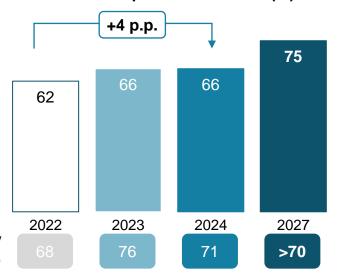

Review of the Group's standards contractual clauses in to increase the visibility of the supply chain (Tier N number) to reduce the risk of potential human rights violations

Geopolitical risk monitoring

Introduction of specific contractual clauses to ensure the mapping of the supply chain in to monitor its geopolitical risk and reduce any negative impacts deriving from supply chain disruptions and increases or volatility in the prices of these materials

Supply tenders amount covered by ranking / target based on carbon footprint values (%)

Supplies' value covered by Carbon Footprint Certification (%)

Health & Safety

To identify hazards, assess qualitative and quantitative risk, plan and implement preventive and protective measures

Set up with representatives of labor organizations, to establish initiatives together with Enel representatives to improve H&S in the workplace

Field inspections defined based on a **risk** data-driven approach to verify behaviors, culture and implementation actions, on both Enel and Contractor personnel to ensure continuous improvement

Structured following data analysis, new Policies or Procedures, and improvement actions arising from the analysis of injuries that occurred during the year

Adopting innovative technologies is an important operational lever for mitigating and managing safety risk and is **fundamental for further reducing work injuries**. Enel follows a risk management approach, starting with an analysis of the context in which it is intended to intervene, **based** also **on accident data**, with the aim of **eliminating**, or at least **reducing**, the **probability of an event occurring**

Health & Safety

Employees and contractors combined

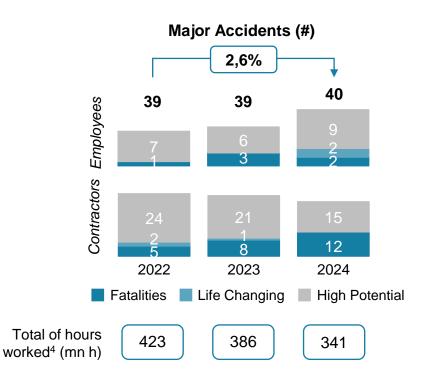

Weighted FR (#) 0.64 **0.47**

20243

2025

The target is calculated by associating a weight to the frequency indices based on the severity of the injury they represent, distinguishing between fatal, Life Changing, High Potential and others, considering all accidents with at least one day of absence

FR = Frequency Rate (injuries over millions of hours worked)

^{1.} Employees' injuries: 153 in 2022: 176 in 2023: 203 in 2024. Contractors' injuries: 809 in 2022: 550 in 2023: 474 in 2024.

2. Accidents with at least one day absence

^{3.} Figure calculated considering the 2025 isoperimeter to make it homogeneous and comparable with the plan target value 4. Includes Enel personnel plus contractors

Engaging communities

Context analysis and stakeholders' identification

- Collection and analysis of socio-economic and environmental data
- Identification of stakeholders in the area of influence
- Analysis of the type of relationship that can be created between Enel and mapped stakeholders

Proactive consultation

- > Free, preventive, informed, adapted to the local context, bidirectional and well documented, in line with international reference standards¹
- Involvement of independent third parties in negotiation processes because of their expertise in the area

Grievance mechanism

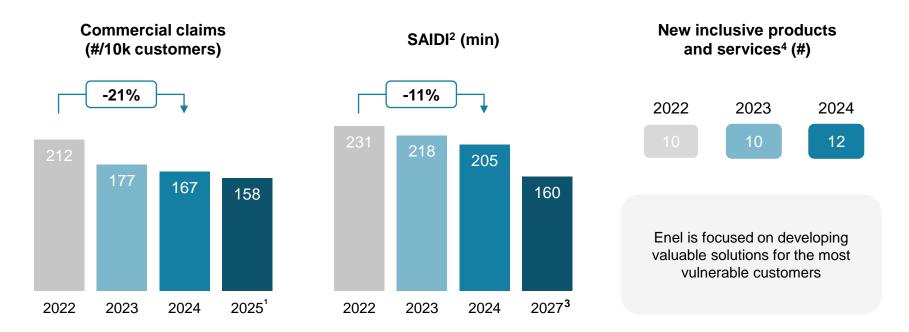

Channels available to any person, based on tools and means available at the local site: local teams or specific people, toll-free numbers, the internet, local leaders willing to collect all possible complaints periodically (in the case of isolated rural communities)

Ongoing dialogue

> Sharing relevant information about the project with affected stakeholders, to promote transparent and collaborative relationships

Customer satisfaction and management

^{1.} In 2025, the geographical perimeter also includes Ceará (Brazil) and Argentina 2. System Average Interruption Duration Index

^{3.} Core countries: 173 in 2024 and 169 in 2023 4. From 2025, the perimeter of the target has been revised to include only products and services in the catalogue (e.g.: preferential rates, financing solutions dedicated to vulnerable customers, etc.), focusing on countries where the market does not pay particular attention to this pool of users.

Growth accelerators

Supporting progress of sustainability

Circular economy

Circular Economy is a strategic lever for Enel with the aim of decoupling its business activities from raw materials consumption and waste generation

Enel's circular economy pillars

Main circular levers

- Design and input materials Reduce the need for new resources, especially critical ones (e.g. material substitution, redesign, use recycled inputs)
- New models for asset use Extend products life (e.g. through design, maintenance, regeneration)
- New life cycle Recover and reintroduce raw materials at the end of the life (e.g. recycling, reuse)

Technological innovation and a circular approach allow to minimize pressure on materials critical for the energy transition, thus reducing potential risk, impacts and associated costs

Circular economy | Focus Wind

Inputs Material

Main materials used:

Steel Fiberglass Copper Aluminium

oc

Useful Life

- > 25 years average lifetime
- Expected volume at end of life considering the installed capacity¹:

New Life Cycle

- Current recyclability ~85 % (steel, aluminum, copper already fully recycled)
- Estimated recyclability at 2030 ~92% (improvement in the recycling of fiberglass)

Key initiatives (examples)

Wind repowering and new life program

Life extension of wind farm (e.g. in Italy and Spain) through repowering also in order to increase energy production and identification of New Life strategies for recovered components using reuse/recycling/reselling business models

Wind End-of-Life management

Collaborate with specialized Partners to support the development of ecosystem aimed at reusing recycled fiberglass back into several industrial sectors (e.g. insulating panels, distribution cabinets)

41

Circular economy | Focus Solar

Inputs Material

Main materials used:

Aluminium Glass Copper Polysilicon Silver

Useful Life

- > 25 years average lifetime
- No significant volume at the end of life expected before 2040 considering the installed capacity¹

New Life Cycle

- Current recyclability ~80/85% (steel, aluminum, copper, glass already fully recycled)
- Estimated recyclability at 2030 ~90% (improvement in the recycling rate of precious materials such as silver)

Key initiatives (examples)

PV efficiency

Production of a new type of high-efficiency panel with HJT technology, designed to optimize silicon usage by reducing silicon layers by 15% while maintaining performance and efficiency

PV recycling Fotorama

42

To further improve PV recyclability, Enel is collaborating on innovation projects with the aim to identify a suitable treatment for the recovery of precious materials reaching a total recycling rate of 90% or more

1. December 2024

Circular economy | Focus BESS

Inputs Material

Main materials used:

Lithium Grafite Iron Phosphorus Aluminium Copper

Useful Life

- > 15 years average lifetime
- No significant volume at the end of life expected before 2035 considering the installed capacity¹

New Life Cycle

- Current recyclability ~75% (steel, copper fully recycled)
- Estimated recyclability at 2030 ~85% (improvement in the recycling of cells material)

Key initiatives (examples)

Pioneer project (2nd life for batteries)

Development with ADR - Aeroporti di Roma at Fiumicino Airport (Italy) of a storage system with a capacity of around 10 MWh reusing around 780 end of life battery packs from electric vehicles

New battery solution

To reduce dependence on critical materials increasing the efficiency, safety and sustainability of batteries, Enel is developing complementary solutions to lithium batteries

43

Circular economy | Focus Grids equipment

Inputs Material

Main materials used:

Steel (e.g. transformers, poles)
Aluminium (e.g. cables) Copper (e.g meters)

OC

Useful Life

- Specific for each component (e.g. 15/20 years for meters, 40 years for transformers)
- In 2024, approximately 60 ktons of end-of-life materials and components mainly relating to network maintenance/upgrade activities were sent to recovery

New Life Cycle

> Current recyclability >90% (steel, aluminum, copper already fully recycled)

Key initiatives (examples)

Sustainable infrastructure

Model applied to new assets, along the whole value chain, starting from the design phase, for mitigating impacts related to materials consumption, waste production, etc. through the implementation of specific solutions (e.g. use of recycled materials, earths and rocks recovery)¹

Circular Smart Meter

Production of meters using recycled plastic also originating from replaced smart meters, using a circular approach and helping to make our grids more sustainable

Innovation projects samples

Long Duration Energy Storage

Technology portfolio differentiation to compete in upcoming 8 hours energy storage:

- > Vanadium flow battery plant (1.1 MW) under commercial operation @Majorca
- Non-lithium battery solution under testing @Enel Catania Lab; large scale project development and permit started
- > Additional electromechanical solution under assessment to compete in pumped-hydro tender pool

Nuclear alliance

- > The European Industrial Alliance on Small Modular Reactors (SMRs) aims to facilitate and accelerate the development, demonstration, and deployment of SMRs in Europe by the early 2030s
- > Enel working group leader for: Supply chain (Tech provider and operators) and Nuclear safety and safeguards (SMR Pre-licensing activities)
- > Follow up of new technologies and Generation IV Reactors

Snow water equivalent

The aim of the project is obtaining estimates of the snow water equivalent (SWE) and the snow depth (SD) of the snowpack in near real time over the entire Alpine and Apennine range, to reduce exposure to natural water variability and promote the development of space applications to support energy security and economic and environmental sustainability

Space Economy

- Low orbit satellite communication: first adoption in 2024 of industrial solution to provide extended connectivity in remote areas (power plants and grids infrastructures)
- > Space generation and transmission: SOLARIS is an ESA program to study space based solar generation with orbit solar PV with transmission for terrestrial application. Enel partnering with Thales Alenia Space. ESA timeline: 1MW pilot plant in orbit by 2030, Real plants 1GW by 2050

Innovation projects samples

Biodiversity safeguard

> The aim of the project is to avoid impacts on wild birds' life in wind farms and to foster a biodiversity-friendly renewable energy. Camera and radar sensors are able to detect (Al module) and to deter (visual or acoustic) the birds and to automatically shut-down the wind turbines, in case of risk. Fatal impacts' reduction means to avoid wind turbines stop (profit loss) and penalties of Environmental Authorities.

Grids' digitalization and diagnostic

Quantum Edge Devices (QED), integrates 'Edge Computing' for automatization of secondary substations. It enables digitization, virtualises physical components, improves O&M costs and reliability. 2500 components in field in Italy by 2025

Phasor Measurement Units (PMU) to be integrated into the QED to health monitoring and faults prevention

- > Skybot, robot operating at height and under power, remotely piloted that executes maintenance and construction tasks on the electrical grid. Field test ongoing in Italy
- > e-lectra is a voice assistant that enables fast and easy access to a wide range of information on Enel's platforms, with no need to remove the gloves to consult the APPs. Full Adoption in Italy by 2024
- **Ladder equipped** with new safety systems: stabilizers, anti-fallsystem with anchor point, safety guiding line, allowing also emergency recovery.
- New clothing highly comfortable, breathable and made from recyclable materials. PoC completion by 2024, extended implementation in 2025

Innovation projects samples

Al for Wholesales and Trading Use of Machine Learning and Artificial Intelligence to support Energy Management Business by improving forecasting models. Principal projects are focused on predicting different commodities prices and market dynamics.

The main objective is to optimize hedging and trading activities

Al for Weather Forecasting

> Weather forecasts are a key strategic component of the dynamics of energy markets, and they affect: the demand for all commodities, the production of energy from renewable sources, the price of energy Improving weather forecasts using AI in a short and medium-term horizon to optimize production portfolios and develop internal know-how

Al in Control Room > Support Wind and Solar control room operators with Artificial Intelligence, increasing effectiveness, productivity and safety of operations.

Supporting operators in their daily activity means reducing wind turbines downtime, increasing renewable energy production. It also means increasing operators' time dedicated to added value activities

Al for Asset Management

- Boosting of vegetation management, leveraging satellite image analysis to predict grid collision risk, optimise cutting and improve disaster recovery process in case of extreme events
- > Predictive maintenance algorithms based on already available data on different network components, in order to facilitate emergency restoration

Cyber Security

Cyber threats are continuously increasing in sophistication and frequency worldwide. Cyber security is needed to ensure that the Group is able to effectively conduct its business. With the aim of addressing, managing and reducing cyber risks, the Enel Group has defined and implemented a coherent Cyber Security Framework and an effective Organizational Model

Cyber Security Framework

➤ The Policy, adopted in 2017, addresses the principles and operational processes that support a global strategy of cyber risk analysis, prevention and management. Such Framework is fully applicable to the complexity of regular Information Technology (IT), industrial Operational Technology (OT) and Internet of Things (IoT) environments

People Cyber Empowerment journey

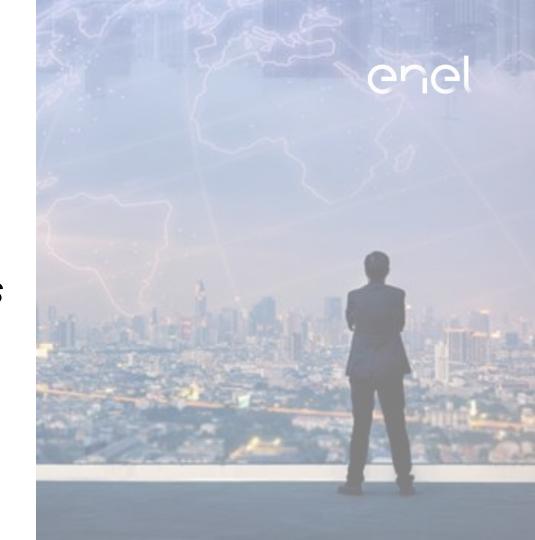

An Awareness Development Program and Anti-Phishing Program that allow Enel people to be the first line of cyber defence

Cyber Security Governance and Structure

- Cyber Security Committee: addresses/approves the Group cyber security strategy and periodically checks the progress of its implementation. Chaired by the Group's CEO and made up of his/her front lines
- Cyber Security Unit: committed to guarantee governance, direction and control of cyber security topics. The Head of Cyber Security unit, which is also the Enel Group CISO, directly reports to the Head of Security Function and to the Head of Global ICT Function (CIO), as part of Global Service Function.
- > Cyber Emergency Readiness Team: to protect the Group's employees and assets, promoting a proactive approach based on "incident readiness" rather than "incident response". Operates through Incident Response, Threat Intelligence and Information Sharing

Board evaluation

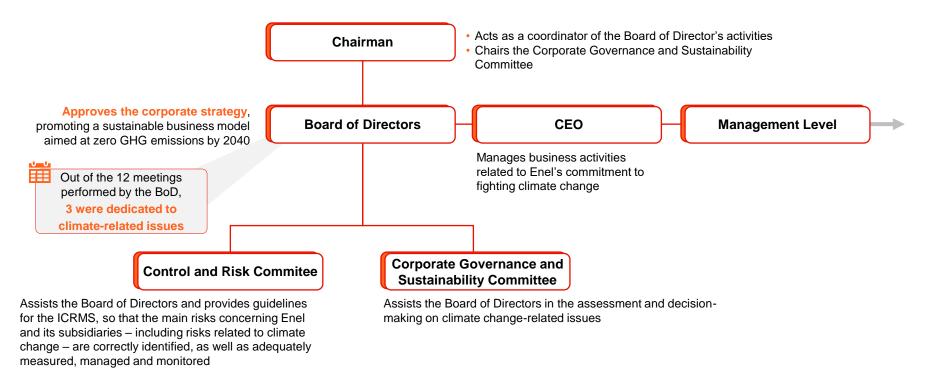

The Board of Directors - with the preliminary support of the Nomination and Compensation Committee - assesses, on an annual basis, the size, composition and actual functioning of the Board itself and that of its Committees. The self-evaluation is supported by an independent advisor that cannot be appointed for more than a consecutive three-year period. From the board evaluation carried out in 2023 several strengths elements emerged, together with the following topics aimed at making the prosecution of the Board mandate even more effective: (i) the importance of pursuing induction activities through the structuring of an ongoing program; (ii) the need to dedicate more time during Board meetings to the issues of cyber security and technological innovation (in addition to the preliminary activity carried out in this regard by Board Committees), also dedicating specific induction sessions to them; (iii) the need to deepen the characteristics and methodological framework of the succession plans, in the form of a "contingency plan" as far as the CEO is concerned and in continuity as far as management is concerned, with an analysis of the adequacy of the procedures in place; (iv) the opportunity to hold some Board meetings at the main offices of the Enel Group, thus facilitating the Directors' knowledge of the Group's activities. With reference to 2024, the Board evaluation process is currently ongoing.

Induction

Following the appointment of the Board of Directors in May 2023, several onboarding and induction initiatives were organized with the aim to provide Directors with an adequate knowledge of the business sectors in which the Enel Group operates, as well as business dynamics and their evolution, market trends and the regulatory framework of reference. During 2023 those initiative were dedicated to Enel's and Group's corporate governance system, the structure and operation of the electricity system in general, as well as in-depth analyses of the different global business lines (Generation, Grids, Energy and Commodity Management and Enel X) of the Enel Group and the activities of the People and Organization staff function. In 2024, further specific induction initiatives were held concerning climate change, cyber security and innovation and digital innovation (including artificial intelligence). The Statutory Auditors regularly attended the induction sessions.

Safety	Safety in the workplace	20%	FI ³ < 0.48 & FA ⁴ ≤ 4	FI ³ < 0.41 & FA ⁴ ≤ 4	FI ³ ≤ 0.39 & FA ⁴ ≤ 4	ESG
Customer Satisfaction	Commercial complaints ⁵	10%	180/10,000 users	170/10,000 users	165/10,000 users	ESG

^{1.} Management by objectives (MBO) 2024

^{2. (%)} Weight in the variable remuneration

^{3.} FI: Work-related accident Frequency Index in 2024 = Number of accidents (more than 3 days of absence from work) / total amount of worked hours (Enel + contractors) expressed in millions

^{4.} FA: Number of Fatal Accidents during 2024, except for road events (Enel + contractors)

^{5.} Commercial complaints at Group level, considering that the perimeter of such performance objective includes the following "core" markets of presence: Italy (free market), Iberia (Spain and Portugal), Brazil (Rio de Janeiro and São Paulo), Chile and Colombia

2024 Long-term variable remuneration¹ 150% of the base amount is assigned for the CEO/GM in Enel shares²

Macro objective	Objective	Weight ³	Target (130%) ⁴	Over I (150%)	Over II (280%) ⁴	Type of target
Performance	TSR ⁵	45%	Enel's TSR = 100% of Index's TSR	Enel's TSR = 110% of Index's TSR	Enel's TSR ≥ 115% of Index's TSR	Market
Profitability	Cumulative ROIC - WACC ⁶	30%	= 12.2%	= 12.5%	≥12.8%	Economic
Climate Change	GHG Scope 1 and 3 emissions reduction	15%	$135 \mathrm{gCO}_{\mathrm{2eq}}/\mathrm{kWh}_{\mathrm{eq}}^{}7} \\ & \mathrm{Scope} 1 \leq 125 \\ & \mathrm{gCO}_{\mathrm{2eq}}/\mathrm{kWh}_{\mathrm{eq}}^{}8} \\ \end{aligned}$	$132 \ \text{gCO}_{\text{2eq}}/\text{kWh}_{\text{eq}}^{7}$ & Scope 1 \le 125 $\text{gCO}_{\text{2eq}}/\text{kWh}_{\text{eq}}^{8}$	\leq 130 gCO _{2eq} /kWh _{eq} ² & Scope 1 \leq 125 gCO _{2eq} /kWh _{eq} ⁸	ESG
Gender Gap	% of women managers and middle managers ⁹	10%	= 33.5%	= 33.75%	≥ 34%	ESG

- Long-Term Incentive (LTI) Plan 2024. Performance period: January 1, 2024 December 31, 2026.
 30% payment (if any) in the 4th year. 70% payment (if any) in the 5th year (deferred payment)
- 2. 100% for the CEO-1 managers; 65% for the other beneficiaries of the LTI Plan 2024.300 managers beneficiaries in total).
- The number of Enel shares to be assigned is determined on the basis of the arithmetical mean of Enel's daily VWAP in the three-months period preceding the beginning of the performance period
- Enel's daily VWAP in the three-months period preceding the beginning of the performance 3. (%) Weight in the variable remuneration
- 4. 100% at Target and 180% at Over II for the beneficiaries of the LTI Plan 2024 other than the CEO/GM
- 5. Average TSR Enel compared to average TSR EUROSTOXX Utilities Index-EMU, calculated in the 3-year period 2024-2026
- 6. For the 3-year period 2024-2026
- 7. GHG Scope 1 and 3 emissions (integrated power) per kWh equivalent produced by the Group in 2026
- 8. GHG Scope 1 emissions (power generation) per kWh equivalent produced by the Group in 2026 (gateway objective)
- 9. Over the total population of managers and middle managers at the end of 2026

2024 CEO remuneration | Termination agreements

Pro rata temporis rule

In case of misalignment between the performance period of the 2024 LTI plan and the term of office of CEO/GM, due to the expiry of its mandate without renewal, a "pro rata temporis" rule for compensation was confirmed¹

Severance payment

- > A severance payment equal to 2 years of fixed compensation payable only in the event of:
 - > termination and/or dismissal of the CEO/GM without just cause³; > resignation of the CEO/GM due to a just cause
- No severance payment is provided for in cases of variation in Enel's ownership structure (so called "change of control" provision)

Non-competition agreement

- It was confirmed the grant by the CEO/GM to the Company, for a consideration equal to 500,000 € (payable in three yearly installments), of the right to activate a non-competition agreement, upon termination of directorship and executive relationships
- > Should the Company exercise such option right, the agreement refrains the CEO from carrying out activities in competition with the Enel Group, for a period of two years and within specific Countries², for a consideration equal to a 3,040,000 €, i.e. 2 years of fixed remuneration, in addition to the aforesaid consideration for granting the option

^{1.} Specifically, in the event of expiration of directorship relationship without simultaneous renewal of the same – and, therefore, in the event of automatic termination also of the executive relationship – before the LTI 2024 performance period conclusion, it is provided that the CEO/GM shall maintain the right to the disbursement of the accrued incentive, based upon the level of achievement of the performance objectives provided under the Plan, and that the final assessment of the incentive will be made *pro rata temporis* until the date of termination of the directorship and executive relationship

^{2.} Namely in the following Countries: Italy, France, Spain, Germany, USA, Chile, Colombia and Brazil

^{3.} It should be noted that the remuneration policy for 2024 takes into account the express waiver, formulated by the CEO/GM, of the indemnity provided for in the remuneration policy for 2023 in the event of non-renewal of the directorship upon the expiration of the term of office, with the consequent termination of the executive relationship

2024 Remuneration Policy | Main changes vs 2023

MBO objectives¹

- Introduction of the **Consolidated cash cost** objective², to enhance the achievement of greater efficiencies, functional to strengthen the financial structure at Group level
- **Commercial complaints** objective simplified eliminating the gateway objectives (complaints in Italy and SAIDI), already reflected in the number of commercial complaints at Group level

LTI objectives¹

➤ **Gender gap** objective modified in nature, as the 2023 objective (% of women in top management succession plans) was achieved and to more concretely measure the Group's commitment to ensuring gender equality, with a focus on increasing women's representation at the managerial level

Severance payment

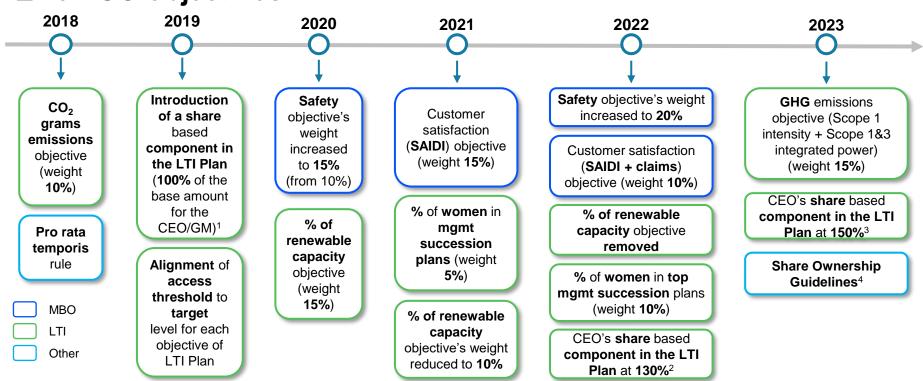

> Indemnity no longer due to the CEO/GM in the event of non-renewal of the directorship relationship upon the expiration of the term of office, with the consequent termination of the executive relationship

Equalization policy

Eliminated the **insurance policy** to guarantee the CEO/GM a pension and contribution treatment of similar scope to the one he would have benefited from the directorship relationship (both fixed and short-term variable compensations), if that relationship had been equalized with the executive one

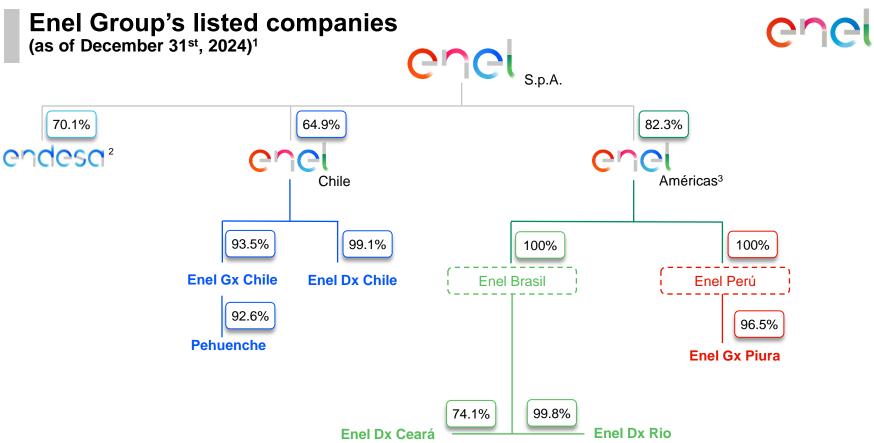

Remuneration evolution with particular reference to ESG objectives

^{1. 50%} of the base amount for the other beneficiaries of the LTI Plan. 2. Of the base amount. Increased to 65% for the other beneficiaries of the LTI Plan

^{3.} Of the base amount. Increased to 100% for CEO-1 managers. Unchanged for the other beneficiaries of the LTI Plan 4. Requirement for the CEO / Executives with strategic responsibilities to achieve (within 5 years) and maintain (during the term of office/as long as they hold the office) Enel shares equivalent to 200% / 100% of gross fixed annual remuneration

Unlisted companies

^{1.} N. 10 listed compaies, including Enel S.p.A.

^{2.} The 70.1 % of the share capital of Endesa is held through the Spanish company Enel Iberia S.A., whose 100% of the share capital is held by Enel S.p.A.

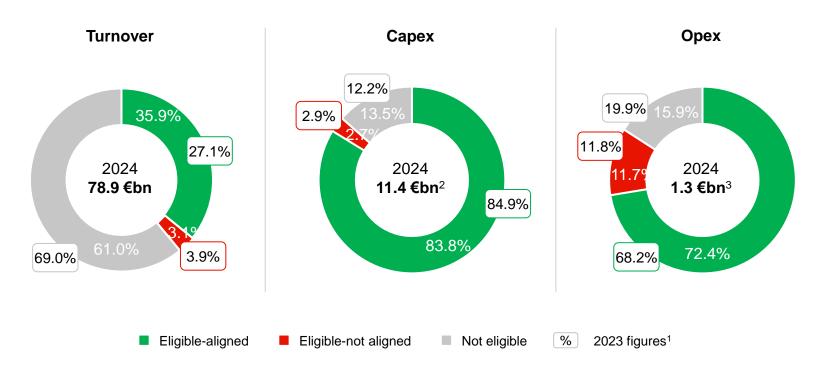

^{3.} Also operating in Argentina, Colombia and Central America through unlisted companies.

ESG Financial Reporting Monitoring progress

EU Taxonomy: Alignment

^{1.} The Revenues (turnover) and the Opex figures for 2023 have been updated to reflect more precise allocation criteria.

^{2.} It includes 0.4 €bn related to increases in assets deriving from leasing operations.

^{3.} Only expenses required by the taxonomy.

Enel's alignment to the criteria – EU benchmarks aligned with the Paris Agreement

Enel is eligible for inclusion in the European Union indices aligned with the Paris Agreement as:

- The percentage of revenue from the exploration, mining, extraction, distribution or refinement of hard coal and lignite in 2024 (and therefore below the threshold of 1%)
- The percentage of revenue from the exploration, extraction, distribution or refining of oil fuels in 2024 (and therefore below the 10% threshold)
- The percentage of revenue from the exploration, extraction, production, manufacturing or distribution of gaseous fuels in 2024 (and therefore below the 50% threshold)
- 3.6%1 The percentage of revenue from electricity generation with an intensity of greenhouse gas greater than 100 gCO_{2eq}/kWh in 2024 (and therefore below the 50% threshold)
 - Its commitment in terms of human rights is in line with the 10 principles of the United Nations Global Compact, which it has adopted since 2004 as an active member, and with the guidelines of the Organization for Economic Cooperation and Development (OECD) for multinational enterprises

It is not involved in any activity related to weapons

It is not involved in any activity related to the cultivation or production of tobacco
