ENEL GREEN POWER AWARDED MULTI-YEAR ENERGY SUPPLY CONTRACTS IN BRAZIL

- *Further to the Tender Enel Green Power will build two new photovoltaic plants in Brazil for an overall installed capacity of 11 MW. The two plants will be located in Pernambuco State.*
- *The new solar capacity add up to 503 MW from wind and hydro Enel Green Power has already been awarded in previous public tenders launched in the past four years and to 93 MW of hydro the company has already installed in Brazil.*

Roma - Rio de Janeiro, January 2nd 2014 – Enel Green Power has been awarded multi-year energy supply contracts with two solar projects for an overall capacity of 11 MW within Brazil's Pernambuco's Solar Tender.

The two projects, named Fonte Solar 1 and 2, are neighbouring and located in northeastern Brazil, Pernambuco State.

In the same area, EGP also has an 80 MW wind project under construction, the Fontes dos Ventos Wind Farm, whose substation, under construction as well, will also receive the power generated by Fonte Solar 1 and 2.

Once operational, the two solar plants will be able to generate up to 17 GWh per year, thereby avoiding the emission of more than 5 thousand tonnes of CO₂ into the atmosphere.

Enel Green Power has been granted 20-year bilateral energy contracts envisaging the sale of a fixed amount of power generated by the two photovoltaic plants to business customers in the Pernambuco State.

The 11 MW from solar add up to the 503 MW of wind and hydro that Enel Green Power obtained in the 2010, 2011, 2012 and 2013 Brazilian public auctions – 283 of which are already under construction – and to the 93 MW of hydro capacity the company already operates in Brazil. Hence, these projects represent a step further in the deployment of Enel Green Power's diversification strategy in Brazil.

In the Brazilian solar sector, Enel Green Power will also build a 1.2 MW thin film photovoltaic system that will be able to supply part of the power required for the construction works of its three hydro projects "Salto Apiacás", "Cabeça de Boi" and "Fazenda" in Mato Grosso State.

Again in the solar sector in South America, Enel Green Power has begun construction works at "Diego de Almagro", its first photovoltaic plant in Chile. The plant, located in the

Atacama Region, will have a total installed capacity of 36 MW. Once fully up and running, the Diego de Almagro plant will be able to generate up to 80 GWh per year.

***Brazil** is among the world leaders in renewable energy generation thanks to its more than 98,000 MW in installed capacity in the sector, corresponding to around 85% of that country's total installed capacity. In Brazil, through Endesa the Enel Group also operates around 1 GW of installed capacity, while in the distribution field, with more than 6 million customers, the Group operates in the states of Rio de Janeiro and Ceará. In the transmission sector, Endesa runs an interconnection line between Brazil and Argentina.*

***Enel Green Power** is the Enel Group company fully dedicated to the development and management of renewable energy sources at the international level, with operations in Europe and the Americas. The company generated more than 25 billion kWh in 2012 from water, sun, wind and the Earth's heat - enough to meet the energy needs of approx. 10 million households and avoid the emission of over 18 million tonnes of CO₂ into the atmosphere. Enel Green Power is a world leader in the sector thanks to its well-balanced generation mix, providing generation volumes well over the sector average. The company has an installed capacity of approximately 8,700 MW from a mix of sources including wind, solar, hydroelectric, geothermal, and biomass. Currently, the company has approximately 740 plants operating in 16 countries in Europe and the Americas.*
