E-MOBILITY: ENEL AND A2A SIGN AGREEMENT ON INTEROPERABILITY BETWEEN CHARGING NETWORKS

- *The partnership will allow customers of both companies to charge their vehicles at around 15,000 charging points across Italy*

Rome, Milan, January 19th, 2022 – Enel, through its new global business line dedicated to electric mobility, and A2A have signed an agreement that will enable their e-mobility service customers to access the two companies' network of around 15,000 charging points throughout Italy.

“The agreement with A2A shows how, as a result of the collaboration between the various operators, it is possible to expand the availability of charging infrastructure for electric vehicles,” said **Elisabetta Ripa**, Head of Enel's Global Business Line dedicated to electric mobility. *“The widespread presence of charging stations and the simplification and speed of charging operations are the main drivers of the process of spreading electric mobility, which we want to continue to boost in Italy and around the world by developing the best solutions for charging electric vehicles in the public and private sectors.”*

“Supporting the electrification of consumption and making infrastructure and services available to customers, is one of the key points of A2A's strategy, in line with its industrial plan up to 2030,” said **Fabio Pressi**, Managing Director of A2A E-Mobility. *“The contribution that the development of electric mobility can make to the challenge posed by decarbonisation is of great importance and the agreement signed with Enel moves in this direction. The interoperability of the charging networks is a key factor in supporting the spread of e-mobility, so the system can provide greater flexibility and coverage throughout Italy, making our charging stations available to a larger number of users and increasing the services offered.”*

The partnership will allow users of A2A's E-moving app and Enel's JuicePass app to fill up their electric cars at the two companies' public charging facilities. These are the best charging technologies on the market: Quick chargers of 22 kW, Fast chargers of up to 50 kW and High Power Chargers which, with a power output of up to 350 kW, can provide an 80% charge to the electric vehicle in around 20 minutes.

Enel is a multinational power company and a leading integrated player in the global power and renewables markets, as well as one of the main gas operators in the retail market. It is the largest European utility by ordinary EBITDA, and is present in over 30 countries worldwide, producing energy with around 89 GW of installed capacity. Enel distributes electricity through a network of over 2.2 million kilometres, and with around 75 million end users is the leading network operator globally¹. On the occasion of Capital Markets Day 2021 and the presentation of the Enel Group's 2022-2024 Strategic Plan, the creation of a Business Line dedicated to Electric Mobility was announced for the management of the approximately 245,000 public and private charging points² for electric vehicles available worldwide¹ and the promotion and development of projects and services for the spread of e-mobility in the countries where the Enel Group operates.

1 Publicly owned operators not included.

2 Public and private charging points. It includes interoperability points.

A2A is the Life Company that deals with the environment, water and energy: the conditions necessary for life. By caring for the wellbeing of people and the environment, A2A provides essential services while promoting long-term sustainability through the best skills and most advanced technologies. Listed on the stock exchange, with around 13,000 employees, the Group manages the generation, sale and distribution of energy, district heating, waste collection and recovery, electric mobility and smart services for cities, public lighting and integrated water services. Sustainability is at the heart of the industrial strategy of A2A, one of the first companies to have defined a policy inspired by the 17 objectives of the UN's 2030 Agenda.
